Foreword 14
Introduction 18

1

Colour and Vision 28

THE THINKING EYE 30

Modern research in visual perception 32
From retinal image to visual perception 33
Stereopsis - Seeing with two eyes 34
The cones and rods of the retina 36

HOW THE BRAIN PROCESSES COLOUR 42

Seeing is a parallel process 42
From the trichromatic theory to the theory of opponent colours 43
The two channels of vision 45
Opponent cells and double-opponent cells 45

ANOMALIES OF COLOUR VISION 48

Colours and ageing 48
Colour-blindness 50

ASSIGNMENTS 53

2

Material and Immaterial Colour 54

MODES OF APPEARANCE OF COLOUR 56

SURFACE PROPERTIES OF COLOUR 59

The surfaces of textiles 59
The surfaces of paintings 61
The surfaces of building materials and paints 62
The printing process and electronic media 62

ASSIGNMENTS 65

3

Primary Colours and Colour Mixture 66

COLOURS AND THEIR VARIABLES 68

Three or four variables? 70
Other attributes of colour 71

PRIMARY COLOURS 72

THE MIXING OF COLOURS 74

Additive mixing 74
The subtractive mixing of pigments 76
Mixing colours in four-colour printing 83
Optical mixing 85

ASSIGNMENTS 90

4

Contrast 92

WITHOUT CONTRAST THERE IS NO COLOUR 94

LIGHT-DARK CONTRAST 96

Degrees of grey 96
Black and white 98
Surface and line 98

CONTRAST OF HUE 102

Complementary colours 102
Simultaneous contrast 102
Vibrating and vanishing boundaries 108

CONTRASTS AS ILLUSIONS 110

Automatic interpretation as part of perception 110

ASSIGNMENTS 115

5

Harmony and Disharmony 116

STARTING POINTS FOR COMBINING COLOURS 118

The Aristotelian legacy 120
“The eye’s tendency to universality” 123
Munsell’s quest for visual comfort 127
“Harmony = order” 129
Bauhaus and after 131
Coda: colour and music 133

ASSIGNMENTS 135

6

Colour as Sign and Signal 136

COLOURS AND MESSAGES 138

Figure-ground recognition 138
Accents and arrangement 138
Directing attention 140

COLOURS CONVEYING INFORMATION 142

Maps – the coding of complex information 143
Colour scales as codes 144
Symbolism, tradition and automatic association 146
Legibility 147

ASSIGNMENTS 149

7

Colour Systems and Colour Models 150

PRECISE IDENTIFICATION OF COLOURS 152

Perceptual identification of colour 154
Physical measurement of colour 155
Putting colours in order 157
The CIE Standard Colorimetric Systems 160

THE MAIN COLOUR SYSTEMS FOR DESIGNERS 166

Munsell 166
NCS – The Natural Colour System 168
RAL 171
CMYK, RGB and HEX 172
Pantone 173
The CIE standards and colour management 174

ASSIGNMENTS 177

8

Illumination and Colour 178

LIGHT, SUBSTANCE AND SENSATION 180

THE LIGHT AND COLOURS OF THE LANDSCAPE 182

The colours of the sky 182
Rainbows, coronas and halos 190
The aurora borealis or northern lights 196

ARTIFICIAL LIGHT AND COLOURS 198

The ergonomics of lighting 199

9

Changing and Constant Colour 202

COLOUR CONSTANCY 204

Lightness constancy 206
White as an anchor of lightness 206
Hue constancy 207
The Retinex theory 210

ASSIGNMENTS 213

10

Colour in Pictorial Space 214

FROM TWO TO THREE DIMENSIONS 216

Colour perspective 219
Aerial perspective 221
Colour and size 222
Border contrast and space 223
The depth of pictorial space 224
Ornament and space 226

ASSIGNMENTS 227

11

Colours in the Built Environment 228

EXTERIOR AND INTERIOR COLOUR 230

The effect of space on the perception of colour 232
The effect of colour on experiencing space 240

ASSIGNMENTS 244

12

Colours Through the Mind’s Eye 246

COLOUR AND PSYCHOLOGY 248

Physiological effects of colours 250

THE EFFECTS OF COLOURS ON EMOTIONS 255

Colours, emotions and design 258

ASSIGNMENTS 261
